

Overview of Discovery

Intent Statement

At Beddington Park Academy, we value the importance of creating global citizens who have the values, knowledge and skills to be not only successful but to be ambassadors of change. We know that every moment at school is an opportunity for learning and so everything we do is 'on purpose'. Our wider curriculum is carefully planned and sequenced to build links across subjects, allowing all pupils to develop their understanding of the world we live in. It pushes children to be critical and curious thinkers who are inspired to continue their learning journey. Learning through our wider curriculum is ambitious and ensures all learners succeed.

Discovery Implementation

At Beddington Park Academy, knowledge is the facts, procedures and experiences stored in long-term memory as schema, developed through implicit and explicit learning that can be retrieved and applied.

Discovery has been planned in a two-year cycle to allow for depth of learning of each topic (see Discovery curriculum map).

Science, History and Geography make up the primary subjects in Discovery. Secondary subjects build on concepts taught through these to aid the development of schema as well as being taught in their own discrete blocks.

Primary Subjects		
Science	History	Geography

Secondary Subjects (also taught in discrete blocks)				
Art and Design	Design Technology	Music	Religious Education	Global Citizenship

English, Maths, Computing, MFL and Physical Education are taught as separate subjects with links being made where appropriate.
